Quantum-Safe NaaS from Edge Clouds and UCPE

Adtran's Ensemble Edge Cloud partners with Intel acceleration technology to deliver secured connectivity powered by Arqit post-quantum symmetric cryptographic key generation. The solution has been verified in a number of commercial networks. It is available through Sparkle, the first provider in the world to offer a commercial quantum-safe solution on a Network-as-a-Service model. The NaaS service builds quantum-safe, high-capacity connections for Data Center-to-cloud, site-to-site, and POP-to-POP use cases. With its zero-touch provisioning feature, Adtran's cloud-hosted management suite ensures that all the benefits of quantum-safe encryption can be deployed at the touch of a button. The enablement of cost-optimized compute platforms and rapid deployment capabilities highlights Ensemble's flexibility and versatility in providing edge cloud capability at the network edge and on-prem locations.
