One platform. Endless Possibilities.

## Broadpeak EdgePeak - High Performance Caching

At MWC, Broadpeak highlights EdgePeak solution, a comprehensive toolbox that offers new perspectives for network operators and content providers to build an efficient and secure CDN. The core element of this solution is the newest Broadpeak caching software, the High Performance Cache (HPC), which delivers exceptional performance and energy efficiency, a real breakthrough in streaming. EdgePeak also supports custom edge computing media-related functions.

The high streaming performance solution running on Intel platform enables operators to optimize their CAPEX & OPEX while bringing high security to the system through its built-in security feature that detects, analyzes, and counters malicious attacks or content piracy.
