Accelerating Telecom Innovation: Intel & SUSE Join Forces to Revolutionize Telecom Infrastructure

The telecom industry faces unprecedented challenges, from meeting customer demands and staying ahead of competition to ensuring security and reliability. To succeed, telcos must innovate faster than ever before. That's why Intel and SUSE are collaborating on optimized support for Granite Rapids-D with the upcoming SUSE Linux Enterprise Server 15, Service Pack 7. Granite Rapids-D is Intel's game-changing processor, featuring the latest generation of P-cores, that promises significant gains in performance and power efficiency utilizing improved AVX for vRAN instructions and integrated vRAN Boost acceleration.

This partnership is pivotal for telcos, enabling them to expedite service and revenue stream delivery through optimized processor utilization, while also unlocking new growth opportunities and keeping their customers' data and services safe with robust security and reliability - all thanks to our open-source expertise in building strong infrastructure foundations. Meet us at Mobile World Congress and discover how this collaboration is driving telecom innovation forward!
