## Powering the Future

Showcase of the PICO-MTU4, the world's smallest single-board computer equipped with the new Intel® Core™ Ultra processor (Series 1). Leveraging the disaggregated die design's hybrid CPU core architecture and dedicated AI engine NPU, the PICO-MTU4 can achieve up to a 24% boost in multi-thread performance and 50% lower SoC power consumption. On a compact 2.5" form factor, this combination makes the PICO-MTU4 a miniature dynamo capable of powering even the most advanced edge computing, smart healthcare, and industrial robotics solutions.
