AI that moves the world.

That's the power of Intel Inside®.

ADLINK ✕ **intel®**

Leading Edge AI Computing

The AI era is transforming embedded systems, enabling intelligent Edge AI Agents capable of real-time sensing, decision-making, and action. At Embedded World 2026, ADLINK showcases its latest solutions built on Intel® platforms, offering a complete portfolio for high-performance, reliable edge AI computing.

- Express-PTL – A compact COM Express® module delivering fast AI inference, computer vision, and graphics processing for robotics, industrial automation, and smart infrastructure.

- AXE-7440GW – A ruggedized 4U Edge AI server bringing data-center-level performance to the field for real-time AI inference and LLM workloads.

- AmITX-RL-WV – A versatile industrial Mini-ITX motherboard providing reliable connectivity and power flexibility for kiosks, medical carts, and mobile edge applications.

ADLINK bridges the gap between high-performance computing and industrial-grade reliability, delivering compact, power-efficient, and scalable solutions that accelerate AI innovation at the edge.
