Cross-Camera Tracking Without Face Enrollment, Securing Safety

At our booth, AIRA will showcase airaTrack, a next-generation AI-powered person tracking solution that transforms existing CCTV infrastructure into an intelligent investigation platform. Unlike conventional facial recognition systems, airaTrack requires no face enrollment, ensuring strong privacy protection and alignment with GDPR while delivering powerful cross-camera tracking and investigation capabilities.

Visitors will be invited to join a live demo, where they can directly experience how airaTrack identifies, traces, and investigates individuals across multiple cameras in real time. The demonstration highlights features such as the dashboard for people insights, face board for instant target selection, map-based navigation, and automated PDF reporting. By interacting with the system on-site, customers will clearly see how hours of manual video review can be reduced to minutes.

Powered by Intel® Core™ processors and OpenVINO™ Toolkit, airaTrack delivers high-performance edge AI without GPU dependency, making it cost-effective and scalable. Deployed in stadiums, enterprise HQs, retail, and factories, airaTrack is redefining security and efficiency.
