Edge AI Loitering Detection Solution Powered by Intel Metro AI Suites

This demonstration highlights real-time loitering detection inference on the eBOX630B edge computing system, powered by the Intel® Core™ Ultra processor. Leveraging Metro AI Suites, the solution utilizes advanced AI models, optimization techniques, and accelerated learning to analyze live video streams, accurately identifying individuals lingering in predefined zones. Its modular architecture ensures seamless integration with diverse input sources and supports multiple AI models to deliver precise, actionable insights.
