## **Intel-Powered BirdDog SDM Integration**

BirdDog's SDM solution delivers a fully integrated NDI® experience powered by the Intel® Smart Display Module (Intel® SDM) platform, transforming how content is distributed across modern AV environments. Built on the high-performance Intel® SDM-L architecture, the BirdDog M1 module functions as a complete NDI Sender and Receiver, supporting up to 4Kp60 for seamless, ultra-responsive video delivery. By installing directly into any SDM-compatible display, it eliminates external receivers, wall boxes, and patch panels, creating the most scalable and streamlined NDI-to-screen workflow available. BirdDog OS enhances this integration with intuitive control, built-in automation via a RESTful API, and compatibility with Crestron systems—making it ideal for corporate, education, and large-scale AV deployments. With Intel technology at its core, BirdDog SDM ensures reliability, performance, and effortless deployment.
