

# *AI that moves the world.*

That's the power of Intel Inside®.

## Intel-Powered Edge AI Robotics Demo

As a key live demonstration at the booth, DFI will showcase its SF101-PTH robotic solution developed in close collaboration with Intel.

Certified as an Intel® AI Edge System and powered by Intel® Core™ Ultra Series 3 processors, the platform features a heterogeneous architecture that tightly integrates CPU, built-in GPU, and NPU to deliver real-time control, vision processing, and AI inference within a single edge system.

Leveraging Intel Integrated AI Acceleration and Intel Real-Time Libraries, the live demo demonstrates millisecond-level responsiveness without the need for discrete GPUs—optimizing performance per watt, reducing total cost of ownership (TCO), and providing a scalable foundation for Physical AI and next-generation robotic applications.
