Company Introduction

LivNSense™ is a leading Industrial AI company that is addressing “Net Zero Challenge” to reduce GHG carbon emissions across the globe. LivNSense has launched GreenOps™, world’s FIRST specialized “Energy Balance” AI platform to address “Net Zero Challenge.” GreenOps™ is a Digital Twins Platform that uniquely addresses the energy balance by harnessing the power of Artificial Intelligence (AI) and Digital Twins technology to impact decarbonization across process value chain with patented IPs. Our key objective is to Improve Process Efficiencies and Reduce GHG Emissions through the power of AI. GreenOps™ differentiates uniquely by enabling cognitive functions for a cleaner, optimized and streamlined production process, reducing the carbon footprint by 10% and improve EBITDA by 4% to 7%. We are helping manufacturing companies who are in the early stages of tackling the “Net Zero Challenge” to stay ahead of the curve as early adopters. We look forward to working together with our customers to make a long-term impact on our planet with comprehensive solutions for decarbonizations, sustainability and energy efficiency. Company headquarters: Bangalore, India / <https://www.livnsense.com>

Solution

LivNSense demonstrates its award-winning AI platform (VICAS) leveraging advanced AI & ML techniques to monitor environments for improved Safety and Sustainability compliance. VICAS is an Industrial “Co-Pilot” with unique algorithms that improves workplace safety and compliance, reduces waste, and improves carbon footprint. The product delivers enhanced operational efficiency, safety, and customer experience.
