AIGE Series for AI Inference

The latest member to NEXCOM's systems with expansion for AI inference and powerful multitasking, the AIGE series kicks off with the 1000 model, along with two variants, offering 500 W and 850 W power to the add-on PCIe x 16 graphic card. Choosing among the variants mean that you will have capabilities to insert different power GPU cards at your fingertips, including a 650 W graphics card for advanced AI and predictive maintenance uses. The onboard M 2 slots are perfect for storage or communication, while the AIGE 1000's lightweight, but sturdy, design ensures that it's the winning choice for industrial environments.
