VNClagoon

Company Introduction

VNC – Virtual Network Consult AG, based in Switzerland, Germany and India – is a leading developer of open source-based enterprise applications and positions itself as an open and secure alternative to the established software giants. With the VNClagoon software stack, VNC, with its global open-source developer community, have created an integrated product suite for Enterprise, SME, Governments and other organizations, characterized by high security, state-of-the-art technology and low TCO.
Company headquarters: Zug, Switzerland / https://www.vnclagoon.com

Solution

VNClagoon is a suite of integrated communication and collaboration solutions that enable you to think beyond boundaries to create a business environment that conforms to the way your organization works. Mainstream solutions are the opposite of that. Plus, with VNClagoon you pay for only the capabilities you need.

- VNClagoon's privacy suite and Intel technologies make it possible to safely run GenAI algorithms, particularly large language models (LLMs) within a safe sandbox environment with top-notch performance and increased security layers.
- VNClagoon executes local compute AI on Intel processors (local AI PC), prompting data within the VNClagoon database securely. Thus, GenAI applications are decoupled from the platforms of the large AI solution providers – preventing any unauthorized access.
- VNClagoon is entirely based on open-source technology and allows any operations to be on site or within a secure cloud environment.
- VNClagoon utilizes the Intel OpenVINO™ toolkit.
