

Intelligence is your edge.

Powered by Intel.

iBASE x intel®

Powering the Future

At the IBASE booth, visitors will experience a full spectrum of Intel-enabled solutions designed to power the future of embedded and industrial computing. Highlights include Edge AI systems such as the AES100, featuring scalable AI performance for demanding applications, and embedded boards like the MBB1005 and MI1005 powered by the latest Intel® Core™ Ultra Processors (Series 2). We will also showcase ruggedized embedded systems, including the ARS200 outdoor computer and MPT series transportation systems, built on Intel® Core™ processors for mission-critical reliability.

A special spotlight is on the IXPC-W215 live demo, a modular 2-in-1 industrial panel PC that combines an Intel® Core™ 3 N355 processor-based ACS200 system with a waterproof touch display, delivering simplified cabling and flexible installation. This solution demonstrates how Intel's processor technologies and USB Type-C PD integration enable compact, powerful, and maintainable designs ideal for smart factories, retail, and kiosks.
