

AI that moves the world.

That's the power of Intel Inside®.

Virtualized AI Acceleration on Intel® Core™ Ultra Processor at the Edge

IEI will showcase a live demo of Virtualized AI Acceleration at the Industrial Edge using the TANK-XM813, powered by Intel® Core™ Ultra Processors (Series 2). With IEI CANAI and the iVEC virtualization platform, AI inference runs efficiently in the virtualization host layer while maintaining workload isolation and system reliability.

The demo leverages the built-in Intel NPU and the OpenVINO™ toolkit optimization to enable scalable, power-efficient edge AI without requiring an external AI box or discrete GPU.

Visit IEI at booth 3-359 to explore standardized AI model deployment and simplified integration for ISVs/SIs.
