

Intelligence is your edge.

Powered by Intel.

JHCTECH x **intel**®

Powering the Future

As an Intel Titanium Partner, JHCTECH will showcase its latest Intel-powered edge AI solutions at Embedded World North America. Our flagship systems, BRAV-7722 and BRAV-7820, are both certified as Intel Qualified Edge AI Systems, delivering heterogeneous CPU + GPU performance, DDR5 memory support, and rich I/O for real-time AI inference at the edge. Alongside these, JHCTECH will present a comprehensive portfolio including the KMDA and KGEC series box PCs and controllers, ATX-I980 industrial motherboards, ECM-I913 embedded boards, and NODE-I916 core modules. These solutions address key applications in smart transportation, machine vision, intelligent security, industrial automation, and logistics. Visit our booth to discover how JHCTECH, in collaboration with Intel, is enabling the next generation of scalable and reliable edge AI computing.
