Retail Reinvented with Intel® Technology

KIOSK Information Systems, Inc. is a global leader in self-service automation, partnering with Intel® to power the next generation of intelligent retail experiences. From self-checkout and returns to click-and-collect, digital signage, and endless-aisle solutions, KIOSK helps retailers increase throughput, optimize labor, and deliver engaging omnichannel customer experiences.

By integrating Intel® processors, IoT platforms, and Intel vPro® technology, KIOSK ensures every retail deployment combines exceptional performance with built-in security and manageability. Intel's advanced capabilities enable remote monitoring, predictive maintenance, and real-time analytics—giving retailers actionable insight into device uptime, usage trends, and customer behavior while reducing total cost of ownership.

Designed, manufactured, and supported in the U.S., KIOSK's retail systems are built for scalability and reliability across high-traffic environments. Together, KIOSK and Intel® empower leading retail brands to meet rising consumer expectations with connected, efficient, and personalized self-service solutions that drive measurable ROI and long-term loyalty.
