Empowering AI Across Industries

Continuing the core spirit of “Unleashing the Ingenuity of SD Edge Computing,” NEXCOM will showcase software-defined edge applications across two segments: AIoT Solutions and AI Computing. The exhibition will highlight how AI technologies empower enterprises with new momentum, bringing Edge AI into industries to usher in a smarter, safer, and more automated AI-supportive operations. Specific highlights include AI-enabled solutions in Smart Manufacturing with:

- **Smart Manufacturing**
AIoT solutions enable real-time data processing and AI/ML inference at the edge, enhancing automation and intelligence in industrial environments.
- **Rugged Mobility**
AI computing supports advanced telematics, vehicle diagnostics, and fleet management in harsh, in-vehicle conditions.
- **Smart City**
AI-powered systems drive intelligent services in urban environments, including self-service kiosks, smart parking, and EV charging infrastructure.
