iBASE x intel®

Advanced Signage Solutions

During ISE 2026, IBASE will host three live demonstrations to showcase its comprehensive digital signage solutions across a wide range of Intel-based platforms. The demonstrations will feature systems powered by the latest 13th/14th Gen Intel® Core™ processors, Intel® Core™ Ultra processors (Series 1), Intel® Processor N-Series, and Intel® Atom® x7000RE Processor Series. Through real-world scenarios such as video walls, menu boards, and compact signage installations, IBASE will demonstrate how its platforms enable flexible and scalable deployment for diverse commercial environments.

IBASE offers a complete portfolio of digital signage media players designed to support both single and multi-display configurations. These solutions are well suited for restaurants, retail stores, banks, airports, and shopping malls, helping businesses deliver dynamic content and targeted promotions. From entry-level systems to mid-range and high-performance platforms supporting FHD, 4K, and even 8K content, IBASE digital signage players are engineered to deliver reliability, visual excellence, and an enhanced customer experience across a wide range of applications.
