## **AI-Powered Smart Display Solutions**

Q-SYS is a full stack AV platform that unifies data, devices and a cloud-first, open architecture to deliver real-time action and insight.

The Q-SYS AV Platform serves as the foundation that drives a multitude of products including native software, services and hardware. Its modern IT architecture and a set of development tools enable an entire Ecosystem of third-party integrations developed by Q-SYS Partners as well as a worldwide community of Q-SYS programmers and developers.

All Q-SYS Core processors are standardized on Intel chipsets, providing Q-SYS with the processing headroom to deliver features at the software level, removing the need for dedicated hardware found in traditional AV systems.

### **Partner Name**

**Q-SYS**

### **Booth Location**

**2M300**

### **Solution Names**

- **Core 8 Flex**
- **Core Nano**
- **NV-32-H**
- **Core 24F**
- **Server Core X10**
- **Server Core X20r**
- **VSA-100**
- **VisionSuite AI Accelerator**
- **UC Compute Bundle for Microsoft Teams Rooms**
