Redefining AI Performance in Compact Form

During the ISE 2026, Giada will introduce two powerful, space-saving solutions engineered for the AI era. The Giada N602 is a compact AI PC, directly powered by Intel® Core™ Ultra 5 or Ultra 7 Processors (Series 2) to deliver dedicated AI acceleration for intelligent computing at the edge. For more demanding professional workloads, the WA814 is a compact workstation built on the robust Intel® B760 Chipset, offering a stable and high-performance foundation for AI development, content creation, and complex data processing. Both solutions provide a formidable blend of cutting-edge performance and a small-footprint design, empowering businesses and professionals to deploy advanced AI applications efficiently in any environment.
