Rugged, Secure AI-Ready Edge

AKHET® puts compute exactly where it creates value: at the edge. AERON is our compact, fanless gateway—rich I/O, hardened security, and 24/7 reliability to orchestrate PLCs, sensors, and machine vision with ultra-low latency. MOTION adds scalable performance when workloads spike—GPU/AI-ready, local virtualization, and multi-display output for real-time apps and demanding HMIs. Built and integrated in Europe, AKHET® pairs robust mechanics with long-life components to accelerate deployment and keep operations running.

Powered by Intel® technology, AERON and MOTION deliver strong performance per watt and a trusted roadmap—from Intel® Core™ processors—so you can standardize globally and support locally. The impact: faster decisions, tighter quality control, less backhaul traffic, and fewer unplanned stops. From the production line to the front of house, AERON + MOTION form a complementary duo—rugged gateway + high-performance compute—to deploy a secure, AI-ready edge architecture today.
