Intel x UniStop: Enabling the Future of Smart Retail

At NRF 2026, UniStop Tech will showcase its AI-Powered Autonomous Retail Solution, an advanced retail automation solution powered by Intel technologies. This collaboration integrates Intel® Core™ Ultra Processors (Series 2) based edge computing and AI acceleration capabilities into UniStop's intelligent autonomous retail architecture, enabling real-time data processing, computer vision, and predictive analytics directly at the store level.

Visitors will experience how UniStop's AI system — supported by Intel technologies and software stack — dynamically adjusts pricing, automates promotions, manages inventory, and delivers personalized recommendations, all while optimizing manpower and operational costs.

Together, UniStop and Intel are redefining the boundaries of retail automation by creating a scalable, secure, and operation efficient ecosystem that empowers retailers to make data-driven decisions instantly.

Join us at our booth to see live demonstrations of this collaborative solution and discover how Intel's edge AI technologies are driving the next generation of autonomous, intelligent retail experiences.
