Selfpos 200-AI Loss Prevention Delivers Intelligent Checkout

Wintec brings cutting-edge AI loss prevention to retailers with Selfpos200, a next-generation self-checkout solution powered by Intel® Core™ processors and optimized with OpenVINO™ toolkit for superior AI performance. Our advanced AI camera works seamlessly with Selfpos200 to monitor and analyze customer scanning actions in real time. If a barcode is intentionally covered or an item is skipped, the system instantly detects the behavior and triggers alerts through flashing indicator lights and on-screen notifications. This intelligent solution helps retailers reduce shrinkage, protect revenue, and deliver a smarter, more secure shopping experience.
