TRANSFORMING OUR INFRASTRUCTURE TO MEET THE NEEDS OF TOMORROW

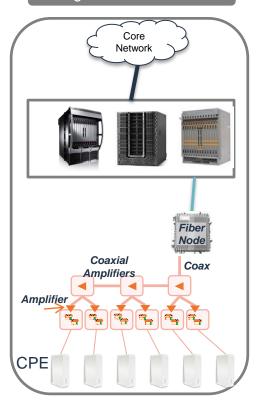

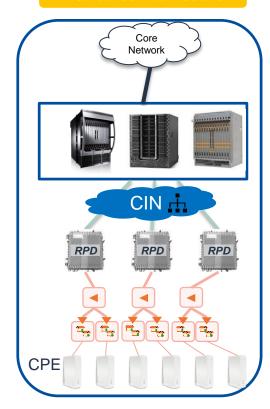

(3)

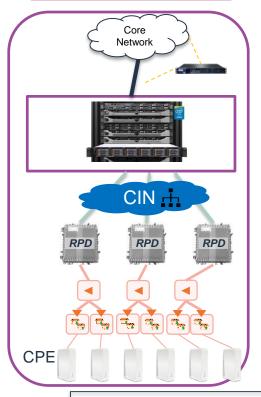

Integrated CMTS/CCAP

Distributed Architecture

Virtual CCAP

Analog coax
Analog optical link
Digital optical link (CIN)

DIGITALIZATION & VIRTUALIZATION

- Digitalization & virtualization:
 - ✓ Reduce RF combining equipment footprint
 - ✓ Reduce optical combining equipment footprint
 - Optimize broadcast and VOD mod/demod equipment
 - Optimize space used to provide CMTS/CCAP capabilities
- Up to 70% Reduction in Rack Space
- Up to 65% power saving
- Increase number of serving nodes by 6x times when compared to current systems

Proprietary Hardware

Cloud Native

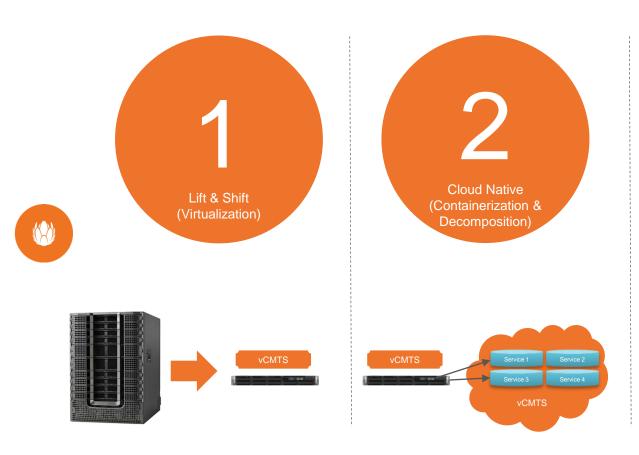

Lift & Shift

Autonomous Networks

THREE WAVES OF NFV

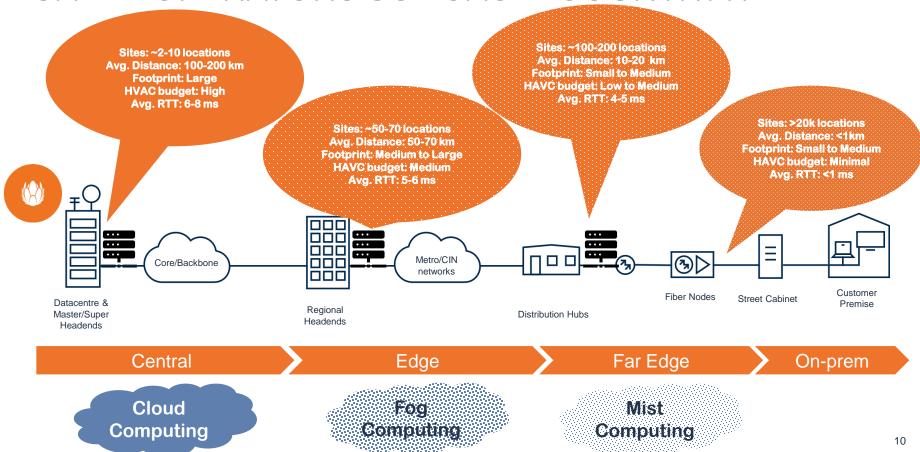

Edge enabler

CABLE OPERATORS USE CASE - COUNTRY X

CABLE JOURNEY TO THE CLOUD... CAN BE BUMPY

- Market and solution fragmentation
- Increased solution and integration complexity
- Organizational and skillset challenges
- Solutions not consistently cloud native
- Vendors provide vertically integrated solutions
- Service design tied to specific hardware
- Infrastructure build for single service
- Operational challenges (maintenance, monitoring, etc.)
